

The complete Access Control System

Features

- ▶ Remote door control
- ▶ Automatic door and gate surveillance
- ▶ Alarm by relay or motion
- ▶ Bi-directional audio
- ▶ Logging of Text, Video and Snapshot
- ▶ For VIP and VideoJet products
- ▶ Integrated Search Tool
- ▶ No Server necessary

Controlware's VipDoorControl is a secure and comprehensive IP access system that lets you see who is at the door before you let them in. The solution includes weather and vandal proof door stations controlled by management software that lets you manage access to your building and remote locations.

The PC based management software runs in the background until visitors request access via the door stations. The management software then alerts users and enables them to see, talk and listen to people at the door stations. Users can then allow access or prevent access to the building or restricted areas.

Since VipDoorControl runs over the TCP/IP network, access to multiple buildings can be managed from a single location enabling time and costs to be saved. By easily extending the VipDoorControl network to support new doors as security requirements evolve in the future the solution is entirely future proofed.

VipDoorControl increases security for hundreds of external entrances, loading areas, remote locations and restricted areas enhancing security by providing the ability for users to quickly identify and verify visitors before granting access.

Search Tool

The built in search tool enables you to add doors with a mouse click by automatically locating door stations.

Preview

The Preview feature provides fast access to view the door location.

Sound File

To distinguish the doors, every single camera can have its own customized sound file. This helps all users to distinguish doors.

Alias Name

The Alias Name feature helps users tag doors so that they are easily recognizable when someone accesses a door station

Away Status

The Away Status lets the system know that a user is not available. As long as this feature is enabled users do not receive any alarm from the connected doors.

Controlware now offers **one-stop shopping** for this application!! Tell us your requirements and we'll customize a 'kit' with all the hardware and software you'll need at a competitive cost.

Who is looking

Find out who else is running the tool.

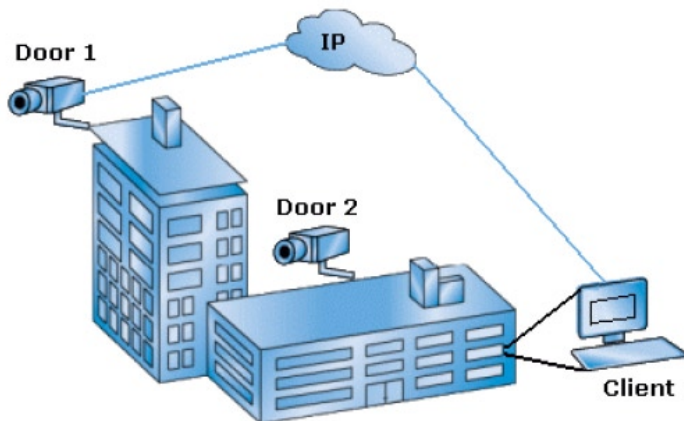

Log file

A log file contains text, pictures or even movies. The resulting logfile is in XML format, showing the logs in any browser. You have direct access to all text files, pictures and you are able to run the movies directly.

Built In Movie Player

The built in Movie Player enables your system to playback the logged movies.

Application Example

Technical Specifications

System Requirements

Windows PC Win2000, XP or better
DirectX 9.0c or better (comes with the CD)
MPEG ActiveX (comes with the CD)
Processor Intel Pentium IV, 2 Ghz or better
Min. 256 MB RAM
Graphic card ATI Radeon, NVIDIA GeForce, Matrox Parhelia or similar
Network adapter
Standard sound card (Optional)

Supported devices

Axis 243 SA ,VIP10, VIP1000, VideoJet10, VideoJet1000, VideoJet 8000
VideoJet 100 and Video 400 with MPEG-4 Firmware
Ports used
1757 for search tool, not changeable
51915 for communication between clients, changeable
80 or dynamic UDP for Video stream, changeable in Client and Encoder
