

# Splunk Enterprise Workshop

Splunk4Rookies

## Situation

In most companies, data forms the basis for business-related decision-making. Yet even the largest collection of data is not of much use if the parameters are not well set up in relation to one another or linked up in a meaningful way. Things that used to be done by large teams of analysts are today dealt with more efficiently and intelligently through IT support.

In our Splunk4Rookies Workshops, you will work with our Splunk team to find solutions for a series of tasks and will get a greater insight into Splunk Enterprise.

Splunk Enterprise is a platform for log management, monitoring and reporting that can make almost any type of data and data source usable. This platform will enable you to make use of collected data for various different use cases.

## Starting situation

This workshop is ideally suited to the following challenges:

- You are not yet familiar with the Splunk Enterprise platform and would like to get some initial impressions.
- You already use Splunk Enterprise in your company and would like to involve further departments and in doing so break down IT silos.
- You would like to give new employees a standardized introduction to the platform.
- You have some fundamental questions on the subject of Splunk Enterprise and would like to be able to discuss these with a specialist.

In order that we can make future decisions on the basis of Big Data – i.e. large quantities of data that arise in the everyday work of a company – this data must first of all be classified and evaluated by carrying out a Data Source Assessment. The Data Source Assessment will be carried out in another workshop.

## Implications and benefits of the workshop

Together with our Splunk Team, you will solve a series of fascinating tasks and get a greater insight into Splunk Enterprise:

- Configuration of a Splunk environment in AWS
- Collection and indexing of data
- Generation of search queries and statistics and setting up interactive dashboards

## What we can offer you

- Standardized Splunk training
- Initial hands-on experience
- Creation of dashboards and reports in a closed environment
- Opportunity to talk to our experts

At an introductory session of Splunk Enterprise, the decision-makers in your company can quickly and easily get some key insights for your business, as well as answers to ad-hoc questions. Furthermore, graphic representations are used to help them make a direct comparison between various starting scenarios and options for action, and to weigh up potential business decisions in an easily comprehensible way.

## Why choose Controlware?

Controlware GmbH is one of the leading independent system integrators and managed service providers. The company, which was set up in 1980, develops, implements and operates ambitious IT solutions for their customers' cloud, data center, enterprise and campus environments, with proven service quality offered by their ISO27001-certified Customer Service Centre.

With their many years of experience in the data logging, monitoring and reporting environment, our Analytics Team can give you support and show you the benefits that these solutions can bring.

You will find further information and details in the relevant performance specification.
